

## Table of contents

<b>Ia.</b>	<b>Summary</b> .....	1
<b>Ib.</b>	<b>Zusammenfassung</b> .....	3
<b>II.</b>	<b>Introduction</b> .....	5
1.	<i>Staphylococcus aureus</i> as a human pathogen.....	5
2.	Nosocomial infections by coagulase negative <i>Staphylococcus</i> (CNS).....	9
2.1	Biofilm production in <i>S. epidermidis</i> .....	10
2.1.1	Regulation of the virulence factors in <i>S. epidermidis</i> by the agr system.....	13
3.	Antibiotic resistance in staphylococci.....	15
<b>III.</b>	<b>Materials</b> .....	18
1.	Bacterial strains.....	18
2.	Plasmids and gene probes.....	19
3.	Oligonucleotides.....	20
4.	Chemicals.....	21
5.	Equipments.....	22
6.	Media and supplements.....	23
7.	Antibiotics.....	28
8.	Buffer and solutions.....	29
8.1.	Electrophoresis running buffers.....	29
<b>IV.</b>	<b>Methods</b> .....	30
1.	Isolation of plasmid DNA.....	30
1.1	Small-scale preparation of plasmid DNA.....	30
1.2	Large-scale preparation of plasmid DNA.....	31
2.	Phenol treatment of DNA preparation.....	32
3.	Ethanol precipitation of DNA.....	32
4.	DNA and RNA quantitation.....	32
5.	Digestion of plasmid –DNA with restriction enzymes.....	33
6.	Agarose gel electrophoresis for separation of DNA fragments.....	33
6.1	DNA-size marker (MBI).....	34
7.	Elution of DNA fragments from agarose gels (Gene Clean-Kit).....	35
8.	Dephosphorylation of DNA fragments.....	35

9.	Production of blunt end DNA fragments.....	36
10.	DNA ligation.....	36
11.	Preparation of competent bacterial cells.....	36
11.1	Preparation of competent bacterial cells for transformation by the CaCl <sub>2</sub> Procedure.....	36
11.2	Preparation of competent bacterial cells for transformation by electroporation .....	37
11.3	Preparation of <i>Staphylococcus</i> competent cells.....	37
11.4	Preparation of <i>Bacillus subtilis</i> competent cells.....	37
12.	Transformation of competent cells.....	38
12.1	Transformation by the CaCl <sub>2</sub> procedure.....	38
12.2	Transformation by the electroporation method.....	38
12.3	Transformation of <i>Bacillus subtilis</i> competent cells.....	39
13.	DNA sequencing.....	39
14.	Polymerase Chain Reaction (PCR).....	40
15.	Cloning of the PCR-fragments.....	40
15.1	“SureClone <sup>®</sup> ” ligation kit.....	40
15.2	pGEM <sup>®</sup> -T Easy vector system.....	41
16.	Isolation of <i>Staphylococcus</i> chromosomal DNA.....	42
17.	Southern-hybridization.....	42
18.	Labelling of the gene probe.....	43
18.1	Radioactive labelling method.....	43
18.2	Non radioactive labelling method “ECL-kit”.....	44
19.	Isolation of total RNA from <i>Staphylococcus</i> cells.....	45
19.1	RNA Isolation by “RNeasy <sup>™</sup> ”-kit.....	45
19.2	RNA isolation by “FastRNA”-kit.....	45
20.	Northern hybridization analysis.....	46
20.1	RNA gel electrophoresis.....	46
20.2	RNA-blotting.....	47
21.	β-galactosidase-test “Galacto-Light <sup>™</sup> ”-kit.....	48
22.	Determination of minimal inhibitory concentration of antibiotics (MIC).....	49
23.	Quantitative adherence assay.....	49
24.	Statistics.....	50
<b>V.</b>	<b>Results.....</b>	<b>51</b>
1.	Construction of a P <sub>ica</sub> -lacZ fusion and integration in the chromosome of <i>S. epidermidis</i> 220.....	51
1.1	Cloning of the promotor region of <i>ica</i> gene and fusion with β-galactosidase gene from <i>E. coli</i> .....	51

1.2	Integration of the P <sub>ica</sub> -lacZ fusion in the chromosome of <i>S. epidermidis</i> 220.....	53
1.3	Southern hybridization to determine the correct integration.....	54
1.4	Sequence analysis of P <sub>ica</sub> and lacZ in the recombinant strain 220-1.....	55
2.	Effect of environmental factors on the <i>ica</i> expression.....	56
2.1	Expression of the P <sub>ica</sub> -lacZ during the growth phase in <i>S. epidermidis</i> 220-1.....	57
2.2	Effect of the incubation temperature on the P <sub>ica</sub> -lacZ expression in <i>S. epidermidis</i> 220-1.....	57
2.3	Effect of pH on the P <sub>ica</sub> -lacZ expression in <i>S. epidermidis</i> 220-1.....	58
2.4	Effect of the osmolarity on the <i>ica</i> expression in <i>S. epidermidis</i> .....	59
2.4.1	Effect of the osmolarity on the P <sub>ica</sub> -lacZ expression in <i>S. epidermidis</i> 220-1.....	59
2.4.2	Effect of the osmolarity on the biofilm production in <i>S. epidermidis</i> 220 wild type strain.....	61
2.4.3	Effect of the osmolarity on the <i>ica</i> transcription in <i>S. epidermidis</i> 220.....	62
2.5	Effect of different carbon sources on the <i>ica</i> expression in <i>S. epidermidis</i> .....	63
2.5.1	Effect of carbon sources on the P <sub>ica</sub> -lacZ expression.....	63
2.5.2	Effect of glucose on the biofilm production in <i>S. epidermidis</i> 220.....	65
2.5.3	Influence of glucose on the <i>ica</i> transcription in <i>S. epidermidis</i> 220.....	66
2.6	Effect of ethanol, H <sub>2</sub> O <sub>2</sub> , SDS and urea on the biofilm production in <i>S. epidermidis</i> 215.....	66
2.7	Identification of the <i>sigB</i> gene in <i>S. epidermidis</i> and its expression in response to the biofilm inducing conditions.....	69
3.	Influence of subinhibitory concentrations of antibiotics on the <i>ica</i> expression.....	71
3.1	Influence of pristinamycin (quinupristin/dalfopristin), tetracycline and virginiamycin on the biofilm production.....	72
3.1.1	Influence of pristinamycin and tetracycline on the P <sub>ica</sub> -lacZ expression.....	72
3.1.2	Influence of pristinamycin and tetracycline on the biofilm production in <i>S. epidermidis</i> 220.....	75
3.1.3	Influence of pristinamycin and tetracycline on the <i>ica</i> transcription.....	77
3.1.4	Post-exposure effects of pristinamycin and tetracycline on the P <sub>ica</sub> -lacZ expression in <i>S. epidermidis</i> 220-1.....	77
3.1.5	Post-exposure effects of pristinamycin, tetracycline, and dalfopristin and quinupristin separately, on the biofilm production in <i>S. epidermidis</i> 220.....	78
3.1.6.	Influence of subinhibitory concentraions of virginiamycin on the <i>ica</i> expression in <i>S. epidermidis</i> 220.....	79
3.2	Influence of other protein inhibitors on the P <sub>ica</sub> -lacZ expression in <i>S. epidermidis</i> 220-1....	81
3.3	Influence of cell wall and DNA-gyrase inhibitor antibiotics on the <i>ica</i> expression.....	82
3.3.1	Influence of cell wall and DNA-gyrase inhibitor antibiotics on the P <sub>ica</sub> -lacZ expression in <i>S. epidermidis</i> 220-1.....	82

3.3.2	Influence of penicillin on the biofilm production in <i>S. epidermidis</i> 220 wild type strain.....	84
4.	The role of the accessory gene regulator ( <i>agr</i> ) gene in the regulation of the biofilm production in <i>S. epidermidis</i> .....	86
4.1	Effect of the osmolarity on the RNAPIII transcription.....	87
4.2	Construction of an <i>agr</i> mutant in <i>S. epidermidis</i> 567.....	87
4.3	Inactivation of the <i>agr</i> gene in <i>S. epidermidis</i> 567.....	89
4.4	Southern blot analysis to determine the <i>agr</i> gene replacement in <i>S. epidermidis</i> 567-1.....	90
4.5	Sequence analysis of the <i>agr::ermB</i> site in the recombinant strain 567-1.....	90
4.6	Biofilm production in the <i>agr</i> mutant <i>S. epidermidis</i> 567-1.....	91
5.	The role of the alternative sigma factor ( <i>SigB</i> ) in the regulation of biofilm production.....	92
5.1.	Construction of a <i>sigB</i> knock out mutant.....	92
5.1.1	Construction of a <i>sigB</i> knock out mutator plasmid pSK8.....	94
5.1.2	Isolation of the <i>sigB</i> knock out mutants.....	94
5.1.3	PCR analysis of the <i>sigB</i> knock out mutant.....	95
5.1.4	Southern and blot analysis of the <i>sigB</i> mutant.....	96
5.1.5	Evaluation of the <i>sigB</i> dependent <i>asp23</i> expression.....	96
5.2	Complementation of the <i>sigB</i> mutant <i>S. aureus</i> MA12.2 with a functional <i>sigB</i> .....	97
5.3	Influence of the <i>sigB</i> inactivation on the <i>ica</i> expression in <i>S. aureus</i> MA12.2.....	98
<b>VI.</b>	<b>Discussion</b> .....	102
1.	Biofilm expression is growth dependent and controlled by environmental factors.....	103
2.	Alteration of the <i>ica</i> expression by subinhibitory concentration of antibiotics.....	110
3.	The role of the <i>agr</i> -quorum sensing system in the regulation of the <i>ica</i> operon expression in <i>S. epidermidis</i> .....	113
4.	The role of the alternative transcription factor <i>sigB</i> in the <i>S. aureus</i> biofilm production..	114
<b>VII.</b>	<b>References</b> .....	117
<b>VIII.</b>	<b>Appendix</b> .....	137
1.	Restriction map of the plasmids used in this study.....	137
2.	acronyms and abbreviations.....	142
3.	Publications and presentations.....	145
4a.	Curriculum vitae.....	147
4b.	Lebenslauf.....	148
