

V-3

Outcrop photograph showing a westwardly tilted block comprising Lower Etendeka Group sedimentary and volcanic rocks (Twyfelfontein and Awahab Formation). The outcrop is located in the Skeleton Coast Park in the vicinity of the Uniab Fault (see Fig. 5.3-11) where an isolated SSW-NNE trending ridge provides the exposure (Poiki Locality; S20°46'35"/E13°44'26").
