

Supplemental Materials

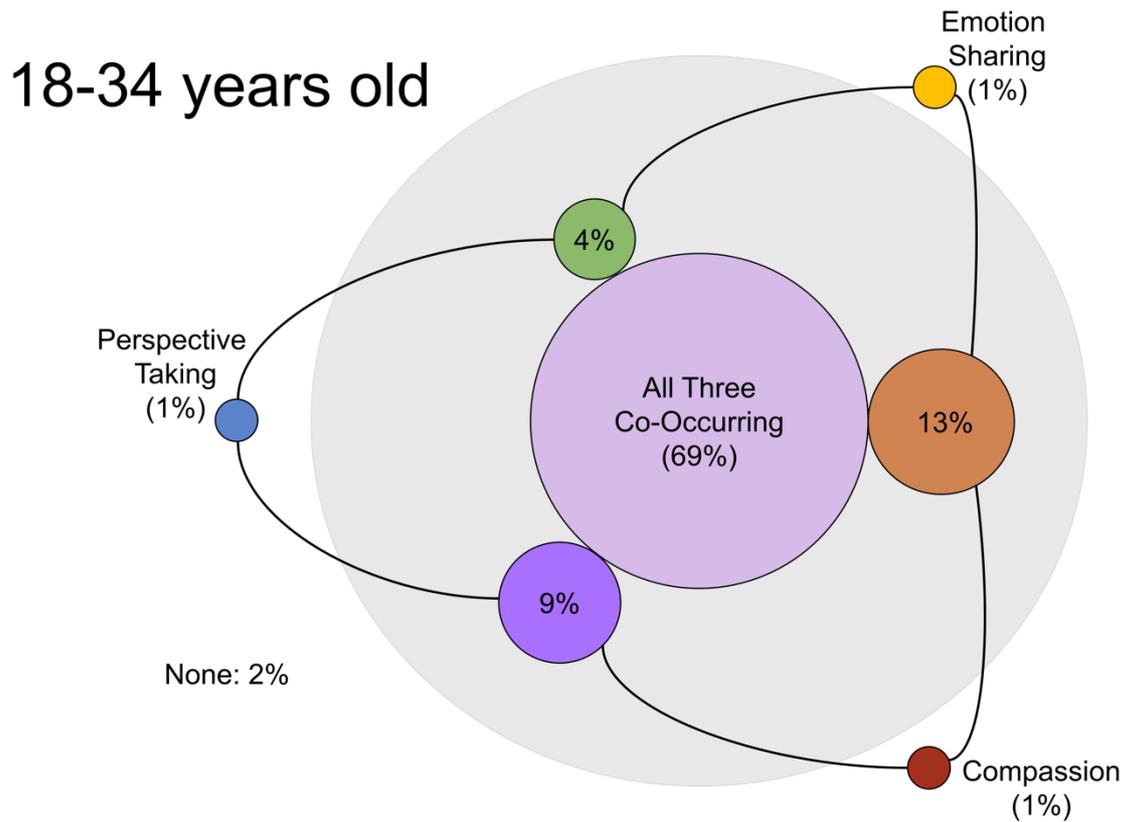

Accompanying the manuscript “Investigating Adult Age Differences in Real-Life Empathy, Prosociality, and Well-Being Using Experience Sampling”

Supplementary table S1. Age predicting extent, difficulty, and confidence of the three subcomponents emotion share, perspective take, and compassion. Statistics obtained from mixed models, nested within participant and survey day. Each interaction ran in a separate model. P-values were adjusted to control the false discovery rate. * $p < .05$, ** $p < 0.01$. ^a Fixed effect structure of the model include religiosity as covariate.

	<i>t</i> or z-score	<i>p</i> -value	Adj. <i>p</i> -value	Estimate (SE)	Effect size (<i>r</i>)
Emotion share extent ~ age	-0.50	.620	.791	0.06	0.04
Emotion share difficulty ~ age	-1.13	.261	.587	0.07	0.08
Emotion share confidence ~ age	-0.39	.695	.791	0.05	0.03
Perspective take extent ~ age ^a	-1.96	.051	.230	0.06	0.16
Perspective take difficulty ~ age	-1.16	.249	.587	0.08	0.09
Perspective take confidence ~ age	0.38	.703	.791	0.05	0.03
Compassion extent ~ age	-0.07	.942	.942	0.05	0.01
Compassion difficulty ~ age	-2.63	.009**	.081	0.07	0.20
Compassion confidence ~ age	0.96	.337	.607	0.04	0.08

15 **Supplementary Figure S1.** Diagram regarding the co-occurrence of the subcomponents
16 emotion share, perspective take, and compassion in younger adults (18-34 years old). Each
17 circle reflecting the relative percentage of the three subcomponents, both occurring individually
18 or concurrently, when actual feelings of empathy were reported. The large circle in the middle
19 demonstrates the percentage of co-occurrence with respect to all three subcomponents,
20 whereas the circles in the light gray ring show the co-occurrence of only two subcomponents.
