

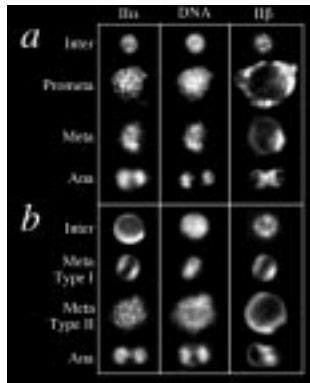

### Figure 3

Fluorescent image ( x 630 magnification) of H69-WT cells and H69-VP at various stages of the cell cycle.

The representative images of the whole cell population for H69-WT (a) or H69-VP (b) in logarithmic growth. Each line shows images of the same cell, which is triple stained for topoisomerase  $\text{II}\alpha$  (left), DAPI (middle), and topoisomerase  $\text{II}\beta$  (right).
