Die Versuche zur vorgelegten Doktorarbeit wurden in der Zeit von November 1995 bis April 1999 am Immunobiologischen Forschungsinstitut (IRIS) der Firma Chiron S.p.A. in Siena (Italien) durchgeführt.

Ich erkläre hiermit, daß ich die Arbeit selbständig und nur unter Verwendung der angegebenen Quellen und Hilfsmittel angefertigt habe.

Würzburg, den

Gunther Spohn

ACKNOWLEDGEMENTS

The first acknowledgement is due to Prof. Vincenzo Scarlato for his supervision of the work presented here and his invaluable personal and professional support without which this thesis would not have been possible.

Thanks are also due to Prof. Werner Goebel for kindly accepting the task of examining the present thesis as a member of the Faculty of Biology of the University of Würzburg and to Rino Rappuoli for providing the opportunity to work in the IRIS Institute.

Special thanks are due to Dagmar Beier, Isabel Delany, Riccardo Manetti and Elisa Marchetti, who contributed in countless ways to this work with their expertise and advice and who made the time passed in the laboratory not only a productive but also a personally very enjoyable one.

Many thanks also to:

Giorgio Corsi for the figures

Isabel Delany for critical reading of the manuscript

Silvia Guidotti and Elena Nebuloso for DNA sequencing

Aldo Muzzi for oligonucleotide synthesis

Nathalie Norais for protein microsequencing

Alfio Ruspetti and Simone Pasquini for preparation of media and plates

and all other colleagues of the IRIS Institute who have contributed with their work or advice to this thesis.

The work presented in this thesis was supported by fellowships of the Gottlieb-Daimler und Karl-Benz-Stiftung and the Italian Ministry for Scientific and Technological Research (MURST).
