Die experimentellen Arbeiten zur vorliegenden Dissertation wurden von Juli 1996 bis Mai 2000 am Klinische Forschergruppe Neuroregeneration der Bayerischen Julius-Maximilians-Universität Würzburg unter der Betreuung von Prof. Dr. Michael Sendtner durchgeführt.

Die vorliegende Arbeit wurde von mir selbständig und nur unter Verwendung der angegebenen Quellen und Hilfsmittel angefertigt.

Würzburg, May 2000

## **Acknowledgements**

First of all, I deeply express my gratitude to my supervisor Prof. Dr. Michael Sendtner, Head of the Clinical Research Unit for Neuroregeneration, for guiding me into this profound neuroscientific field. This doctoral dissertation would be impossible without his academic direction, a great deal of scientific advice, and invaluable points of view as well as brilliant discussions from the beginning to the end of the study.

I am immensely indebted to Prof. Dr. Erich Buchner for his helpful advice, valuable suggestions, careful reading of the dissertation manuscript and probing commentary. His kind encouragement and the pleasant demeanor were of untold help.

I particularly thank Dr. Stefan Wiese, who introduced me to the techniques employed in the study, and gave me useful advice, technical assistance and fruitful comments at various stages of the work.

I am grateful to many colleagues and friends both from my own and from other laboratories. They freely provided helpful technical assistance and information, valuable academic criticism and comments, and constructive suggestions as well as encouragement during the whole period of time of my study in the group.

Last but not least, I greatly acknowledge the Graduiertenkolleg “Regulation des Zellwachstums” Scholarship from the Deutsche Forschungsgemeinschaft and the University of Würzburg, for the financial support that made this doctorate possible.
