

Fig. 5. Photomicrographs of immunofluorescence of coronal sections at the level of the lumbar part of spinal cord of adult *bcl-2*^{+/+} (A,C) and *bcl-2*^{-/-} (B,D) mice under the conventional microscope (50 X). The sections were immunostained with specific antibodies against B-Raf (A,B) and c-Raf-1 (C,D) by using Cy2 fluorochrome-labelled secondary antibody for visualization. Note that B-Raf and c-Raf-1 are confined to the cytoplasm of the motoneurons. The immunointensities of B-Raf and c-Raf-1 are the same as in wild-type mice (Fig. 10), there is no difference between *bcl-2*^{+/+} and *bcl-2*^{-/-} mice.
