

Adsorption of Phloretin to Lipid Layers

**A Study of the Interaction between the Surface Active
Molecule Phloretin and Lipid Model Systems**

Dissertation zur Erlangung des
naturwissenschaftlichen Doktorgrades
der Bayerischen Julius-Maximilians-Universität Würzburg

vorgelegt von
Richard Cseh
aus Plochingen

Würzburg, 1999

Contents

1	Lipid model systems	4
1.1	Biomembranes	4
1.2	Monolayer	4
1.3	Bilayer	5
1.4	Vesicles	6
1.5	The surface active molecule phloretin	7
1.6	Examination of phloretin and its effects on mono- and bilayer	7
2	The adsorption of phloretin to lipid monolayers and bilayers cannot be explained by Langmuir adsorption isotherms alone	9
2.1	Abstract	9
2.2	Introduction	9
2.3	Electrical contribution to Langmuir isotherm	11
2.4	Material and methods	13
2.4.1	Materials	13
2.4.2	Buffers and solutions	14
2.4.3	Measurements of monolayer surface potentials	14
2.4.4	Estimation of phloretin-induced bilayer dipole potential change	15
2.5	Results	16
2.5.1	Phloretin-induced surface potential change of monolayers	16
2.5.2	Phloretin-induced dipole potential changes of lipid bilayer membranes	20
2.6	Discussion	22
2.6.1	Electrostatics has to be taken in account for phloretin adsorption to lipid monolayers and bilayers	22
2.6.2	How high is the dipole potential of monolayers and bilayers	24
2.6.3	The adsorption of dipole molecules changes the dipole potential of monolayers and bilayers	25
2.6.4	Parameters of phloretin adsorption are different between monolayers and bilayers	26
2.6.5	Limitations of the theoretical description of the phloretin adsorption to lipid surfaces	26
2.7	Conclusion	28

3	Interaction of phloretin with lipid monolayers: Relationship between structural changes and dipole potential change	29
3.1	Abstract	29
3.2	Introduction	30
3.3	Materials and methods	31
3.3.1	Materials	31
3.3.2	Buffers and solutions	31
3.3.3	Measurements of monolayer surface pressure	31
3.3.4	Measurements of monolayer surface potentials	32
3.4	Results	33
3.4.1	Phloretin-induced surface pressure changes of monolayers	33
3.4.2	Effect of pH on II-A isotherms in the presence of phloretin	36
3.4.3	Effect of phloretin on the phase transition of monolayers	37
3.4.4	Phloretin-induced surface potential changes of monolayers	40
3.5	Discussion	42
3.5.1	Phloretin integrates into lipid monolayers	42
3.5.2	Phloretin changes the phase behavior of lipid monolayers	44
3.5.3	Adsorption of phloretin to monolayers can occur without affecting lipid packing	45
3.5.4	Relation between surface potential change and lipid packing	46
3.6	Conclusion	52
4	Interaction of phloretin with membranes: On the mode of action of phloretin at the water-lipid interface	53
4.1	Abstract	53
4.2	Introduction	54
4.3	Materials and methods	55
4.3.1	Materials	55
4.3.2	Buffers and solutions	56
4.3.3	Differential scanning calorimetry (DSC)	56
4.3.4	Measurement of phloretin adsorption	56
4.3.5	^2H NMR measurement of SSVs	57
4.3.6	Computational methods	57
4.4	Results	58
4.4.1	DSC with multilamellar lipid vesicles	58
4.4.2	Computational calculation of the phloretin conformers	60
4.4.3	Adsorption isotherm of phloretin to SSV	66
4.4.4	^2H NMR with unilamellar lipid vesicles on a spherical support (SSV)	68
4.5	Discussion	70
4.5.1	Interaction of phloretin with lipids in membranes	70
4.5.2	Phloretin conformers and their dipole moments	71
4.5.3	Parameters of phloretin adsorption to membranes	72

5	Conclusions	74
5.1	Phloretin binding to proteins	74
5.2	Indirect effects of phloretin on cell membranes	75
6	Summaries	77
6.1	Summary	77
6.2	Zusammenfassung	78
7	Appendix	81
7.1	References	81
7.2	Curriculum vitae	90
